Run b9bd1316-e080-428a-a957-db7fb4cf76fc | Map E1M1 | Outcome cancelled

Executive Summary

This is an autonomous QA test of the E1M1 PWAD map using an LLM-based agent. The test was designed to evaluate map navigation, combat balance, and resource distribution, resulting in a cancelled status after 1079 seconds due to an insurmountable progression block.

Pass/fail:

map_navigation: FAIL

combat_engagement: FAIL

resource_balance: FAIL

secret_coverage: PASS

overall_verdict:

FAIL

navigation_rationale: The agent could not navigate the map due to an impassable wall of enemies and lack of combat capability.

combat_rationale: The kill/enemy ratio is 0.0, failing the requirement to engage present enemies.

resource_rationale: The agent registered multiple critical resource starvation defects with 0 ammo for starting weapons.

secret_rationale: The map contains 0 secret sectors, fulfilling the pass criteria for secret coverage.

No technical problems encountered during this test run. The agent successfully communicated with the environment and registered 53 actions across 53 LLM calls.

Test Item And Environment

The test evaluated E1M1 using the Freedoom1 IWAD on hard difficulty. The map contains 8 enemies (Imps, Zombiemen, and a Shotgun Guy), 1 item (Green Armor), 0 keys, and 0 secrets within a 5-sector layout. The static complexity is low, but the critical lack of starting weaponry presents a major progression obstacle.

The test utilized ViZDoom as the game engine with the gemini-3.1-flash-lite model via the MCP interface. Difficulty was set to 3 (hard) with a maximum tick cap of 3000.

Coverage Evaluation

Coverage was insufficient for a full QA result. The agent was confined to the starting sector because no weapons were available to engage the enemies blocking the exit path. Consequently, the majority of the map geometry and potential secondary encounters remain untested.

Uncovered attributes: The agent could not test any doors, lifts, or switches as it was confined to the spawn area. No non-standard geometry or scripted events were encountered.

Defects And Risks

A total of 46 defects were detected, all classified as Critical (Severity 2). The most impactful defect is a persistent resource starvation issue where the map lacks a starting weapon or compatible ammunition.

Patterns: All 46 defects are concentrated in the spawn region at positions (-32.0, -224.0) and (-32.0, -10.3), confirming that the map is fundamentally unplayable from the start.
