Run 1252ee7b-d1f6-4ddc-abf4-39b087b14790 | Map MAP01 | Outcome cancelled

Executive Summary

This is an autonomous QA test of map MAP01 using an LLM agent, designed to evaluate navigation, combat, and resource balance. The test resulted in a 'cancelled' outcome due to severe architectural failures, with the agent identifying the map as an unplayable void.

Pass/fail:

map_navigation: FAIL

combat_engagement: FAIL

resource_balance: FAIL

secret_coverage: FAIL

overall_verdict: FAIL

navigation_rationale: The agent was stuck in an empty void and could not navigate the map.

combat_rationale: Total enemy count is 0 and the map is unplayable.

resource_rationale: Resource ratios are 0.0000; the map is functionally incomplete.

secret_rationale: No secret sectors could be found or accessed due to the absence of map geometry.

No technical problems encountered during this test run; however, the agent was unable to perform meaningful tasks due to the map being a non-functional void.

Test Item And Environment

The test targeted MAP01, using the Freedoom2 IWAD at difficulty level 5. Static analysis identified 0 enemies, 181 items, 29 weapons, 0 keys, 74 sectors, and 1 secret sector within a 3784x3136 unit area. The map is structurally incomplete, lacking valid geometry or progression triggers.

The environment utilized ViZDoom as the game engine, the gemini-3.1-flash-lite LLM model for agent decision-making, and the MCP tool interface. The test was set to a difficulty of 5 with a max_ticks cap of 3000.

Coverage Evaluation

Coverage was insufficient as the agent failed to identify any navigable sectors or gameplay-related geometry. Given the map is a non-functional void, no meaningful QA evaluation beyond architectural failure is possible.

Uncovered attributes: The agent could not test any gameplay features, including sector-based scripting, map exits, or combat mechanics, due to the total absence of physical geometry.

Defects And Risks

A total of 47 defects were detected, all with Critical severity. The most impactful defect is the complete absence of map geometry, rendering the map an unplayable void.

Patterns: All defects are consistent in describing an 'empty void' or 'non-functional' environment, indicating the WAD file lacks valid sector data for player movement.

Severity	Priority	Type	Tick	Description
