

Doom PWAD QA Report

Run 0020d138-ac68-4361-bda0-9d8f18e9d9c1 | Map E1M1 | Outcome error

Executive Summary

This is an autonomous QA test of map E1M1 using an LLM agent, designed to validate navigation, combat, resource balance, and secret discovery. The test failed due to a critical preflight timeout, preventing the agent from loading the map and initiating the test sequence.

Pass/fail: map_navigation: FAIL combat_engagement: FAIL resource_balance: FAIL secret_coverage: FAIL

overall_verdict: FAIL

- The agent could not navigate the map due to an engine preflight timeout.
- No combat occurred due to the test failure.
- Resource balance could not be evaluated as the map failed to load.
- Secret coverage could not be evaluated as the map failed to load.

The ViZDoom engine failed to initialize the map, resulting in a preflight timeout after 15 seconds. No agent actions were taken, and no LLM calls were made as the process did not reach the runtime phase.

Test Item And Environment

The test targeted map E1M1 using the Freedoom1 IWAD at difficulty 3. The map consists of 420 sectors, 2742 linedefs, 7 secret sectors, and 3 keys. The enemy breakdown includes 74 spawned enemies at the tested skill, with a significant 'slaughter' classification based on static analysis.

The test environment utilized ViZDoom as the game engine with the gemini-3.1-flash-lite LLM model for agent decision-making. The test was configured for a 500-tick cap at difficulty level 3, utilizing standard MCP tool interfaces.

Metric	Value	Metric	Value
Status	failed	Duration	None
Actions	0	LLM calls	0
Final HP	None	Kills	None
Position samples	0	Movement units	0.0
Recording	Not produced		

Static Analysis Context

Metric	Raw WAD	Difficulty 3	Notes
Enemies	102	74	28 hidden by skill/multiplayer flags
Items	138	133	5 hidden by skill/multiplayer flags
Secrets	7	7	Sector special 9
Geometry	2742 linedefs	420 sectors	2048 x 2560 units

Selected-difficulty estimate: hard. Health ratio: 0.0828. Ammo ratio: 0.0966.

Coverage Evaluation

Coverage was zero percent due to the runtime engine failure. Consequently, no meaningful QA assessment regarding map quality, combat, or exploration could be performed.

Objectives Covered

- **Map launch and initial state capture:** Run status: failed.
- **Agent decision logging:** 0 decision event(s) recorded.

Objectives Omitted

- **Navigate the entire map:** Navigation not possible due to engine preflight failure
- **Engage all enemy types encountered:** Combat could not be initiated
- **Find secrets where accessible:** Map geometry inaccessible
- **Stress-test geometry, doors, lifts, and switches:** Engine failed to load environment
- **Document resource balance issues:** Environment failed to load, preventing analysis of live gameplay

Uncovered attributes: The agent was unable to test any map attributes due to the failure of the engine to load the map file.

Defects And Risks

A total of 1 defect was detected, classified as Severity 3. The most impactful finding is a potential discrepancy in difficulty-specific thing flags that cause items and enemies to be absent in the current test difficulty.

Patterns: Insufficient defects to identify patterns.

Severity	Priority	Type	Tick	Description
3	2	difficulty_spawn_mismatch	0	Difficulty-specific thing flags hide map content At difficulty 3, 28 of 102 enemies and 5 of 138 items from raw static analysis do not spawn in single-player because of Doom skill or multiplayer flags.

Risk Areas

- **System preflight/Engine loading:** high The map fails to load in the current environment, preventing all automated QA validation.

Activity Log Summary

1) Static analysis phase (completed), 2) Map exploration phase (failed), 3) Combat phase (failed), 4) Defect detection phase (completed via static analysis), 5) Report generation phase (completed). No gameplay ticks were recorded.

The planned activity was cut short by a preflight timeout error, preventing all runtime phases.

Limitations And Recommendations

The agent was unable to test any map features, including doors, teleporters, and triggers, due to the total failure of the test execution.

Good Quality Areas

- **Static analysis module:** Successfully parsed map metadata and identified potential issue with thing flags even without successful runtime execution.
