

Doom PWAD QA Report

Purpose

To provide a quality assurance report for the Doom PWAD E1M1, evaluated by an AI agent, focusing on map navigation, combat engagement, resource balance, and secret coverage under a limited tick environment.

Summary

The AI agent successfully completed the map "E1M1" on difficulty level 3 in 2 seconds. The agent executed 1 action and made 1 LLM call. During the run, no items were collected, no enemies were killed, and no secrets were found. The agent finished with 100 HP and 0 armor, indicating no damage taken or combat engagement. The overall outcome of the run was 'map_completed'.

Environment

The test was conducted using the 'freedom1' IWAD. The AI agent utilized the 'gemini-2.5-flash' LLM model. The maximum tick limit for this specific run was 5 ticks. A recording of the run is available at: </media/steven/MaD/matznysh-hna/Agentic-PWAD-QA-Doom/Backend/storage/recordings/9e810579-8a79-466e-ba7f-9845e90e0e0a.mp4>.

Defects

No defects were identified during this test run, as indicated by a defect count of 0. However, 1 notable event occurred during execution. Given the extremely short duration (2 seconds) and the agent completing the map with 0 kills, 0 items collected, and 0 secrets found, it suggests the agent prioritized rapid map completion over full engagement with the map's combat, exploration, and resource elements.
