

Doom PWAD QA Report

Purpose

To evaluate the functionality and playability of the Doom PWAD 'E1M1' using automated testing.

Summary

The test was conducted on map 'E1M1' using 'freedom1' as the IWAD, set at difficulty level 3. The run had a very short duration of 2 seconds, resulting in the player's immediate death (outcome: player_died) with 0 kills, 0 items collected, and 0 secrets found. A total of 1 action was taken. The player's final health and armor were both 0. One notable event occurred during the run.

Environment

The test run was executed using the 'gemini-2.5-flash' LLM model, which performed 1 call. The run ID was 'f7ee1cf9-422c-450c-b507-93bc7b4882b5' and it was linked to static analysis ID 'e57a5d64-ee91-4a12-b3d9-c96c298f1ef1'. The process started on 2026-05-16 at 09:07:15 UTC and completed on 2026-05-16 at 09:07:17 UTC.

Defects

No formal system-level defects were explicitly logged during this run (defect_count: 0). However, the test run resulted in immediate player death (outcome: player_died) within 2 seconds of gameplay, with no items collected or enemies killed. This indicates a significant functional issue, potentially related to the player's starting position, an immediate and overwhelming enemy encounter, or an unplayable map state that prevented any meaningful interaction or progress. The immediate death is a critical functional failure.
